Report Reveals Waste Hauler Transporting, Burning Babies in “Modern-Day Crematorium”

Columbus, OH – February 19, 2019 – According to the website [Christian News](#), The Georgia Environmental Protection Division (GEPD) recently released [findings](#) of an investigation demonstrating that waste giant [Stericycle](#) continues to haul and dispose of aborted babies. The GEPD also reported that Stericycle is the only company picking up at the facility in question despite repeated claims that they do not dispose of aborted “fetuses.”

The abortion facility, A Preferred Women’s Health Center of Augusta, GA, is part of a chain of abortion centers located in Raleigh, Charlotte, North Carolina, and Atlanta, GA.

According to EPD, an agency representative visited A Preferred Women’s Health Center to check if the abortion facility was following state law regarding fetus disposal. Paula Clark and Calla Hales, both employees of the abortion mill, confirmed that Stericycle is their sole medical waste hauler.

“[Clark] stated that Stericycle does pick up all of their biomedical waste at one time about once a month,” the investigator wrote. The incinerator referred to in the report is a plant located in Haw River, NC.

- [Read the full Georgia CEPD report here.](#)

Despite [dropping contracts](#) with hundreds of abortion facilities, Stericycle is lying about its transportation and disposal of fetal remains. Stericycle needs to dump the abortion cartel altogether or face continued public exposure, humiliation and more criminal charges. [Project Weak Link](#) will keep the pressure on all medical waste companies until none of them enable the abortion industry.

One by one, city by city, abortionist by abortionist, enabler by enabler, we will keep exposing the illegal activity of the abortion cartel until abortion is abolished entirely.
